Most EV platforms are reused.

Almost none of them are reusable.

Until now.

Customer differentiating IP — *your algorithms, your strategies, your IP*

EV GENERIC DECK

The reusable layer in your EV ECU stack

- ✓ EV application SWCs
- ✓ BSW configuration & integration
- ✓ ASPICE artefacts & traceability
- ✓ FuSa & cybersecurity hooks

AUTOSAR description / ARXML — *handover boundary*

Customer-selected AUTOSAR Classic foundation — *RTE · BSW · OS*

Customer-selected microcontroller & silicon — TI · ST · NXP · Infineon

Optional — TBS verified hardware reference design — *accelerates the baseline*

Customer keeps the differentiating IP. TBS provides the reusable platform. The customer selects the AUTOSAR Classic foundation and silicon.

parameters identified	**not years**	**aligned**
in a single BMS AUTOSAR configuration	from spec to runnable EV ECU demo	across system, software and hardware

LET'S TALK

Scan for the technical brief

EV Generic Deck — let's compare notes

Hiring senior EV engineers takes months.

Programme deadlines don't.

Bring in engineers who hit the ground running - across systems, software, hardware and validation.

SYSTEMS

Requirements engineering. System architecture. Functional safety and cybersecurity requirement engineering.

SOFTWARE

AUTOSAR Classic and non-AUTOSAR. EV application software. CDD development and integration.

HARDWARE

ECU architecture and detailed design. Board bring-up. HV test rig design and development.

VALIDATION

HIL benches. Test automation. Plant modelling. Customer-site bring-up and commissioning.

ASPICE-aligned · ISO 26262 hooks · ISO 21434 hooks · AUTOSAR Classic-friendly

=

EV ECU baseline

in months, not years

Runnable, ASPICE-aligned, customer-tailored

THE PLATFORM

EV Generic Deck supplies reusable, ASPICE-aligned EV ECU foundations.

THE INTEGRATION

TBS engineering delivers the systems, software, hardware and validation work.

THE IP

The customer keeps the differentiating IP that makes their product distinct.

SUPPORTED ACROSS · TI · ST · NXP · INFINEON

Works with the customer-selected AUTOSAR Classic toolchain. Optional verified hardware reference design where it accelerates the baseline.
